

AccuClave® Thermocouple Assembly Refurbishment

Affordable and sustainable way to reuse thermocouple assemblies

Affordable and sustainable way to reuse thermocouples

All Refurbishments Include:

- Untangling
- Inspecting
- Coiling/packaging
- Old junction trimming and re-welding of a new junction
- Continuity testing

Features:

- Rework almost any thermocouple no matter the type, gauge size, or insulation
- Rework capacity of 10,000+ thermocouples per month
- Yield of 70%+ per rework

Thermocouple Refurbishment Program Overview

TE Wire and Cable partners with aerospace manufacturers to establish sustainable practices through thermocouple design, refurbishment, and end-of-life recycling. We help our clients focus on their business and support their green initiatives while saving on their indirect consumable spending.

As a service to all AccuClave® customers, TE Wire and Cable offers a product refurbishment program to transform used thermocouple products to like-new re-usable conditions per AMS2750F.

The program begins with a no-charge, complete evaluation of your product after first use to identify and agree on the appropriate statement of work and whether after use condition lends itself to refurbishment and subsequent re-use in your process. Upon completing the evaluation, we will promptly provide you with a quotation for refurbishment or further recommendations to support your cost-saving initiatives.

Get more value from your thermocouple; contact us today to receive your free AccuClave® Thermocouple Assembly refurbishment evaluation.
